

Inspiring kids in STEAM amidst a global pandemic

This Giving Tuesday We give thanks and press on

Throughout the pandemic, Hk has supported teachers in their virtual classrooms in delivering engineering design curriculum, provided remote training to high school students to prepare them for research internships at NYC's top research institutions, and run the bioengineering design program for middle and high school students to create solutions to biomedical problems with materials mailed to students. We were very nimble and resourceful with programming all the while supporting students who were experiencing real trauma.

In this unprecedented time of substantial learning loss where most schools are wholly unequipped to do hybrid and remote learning in the midst of a national health crisis, we can ensure that children are able to do hypothesis-based engaging science in informal settings.

We are now gearing up to bring Hk to K-5 students in shelters and low income housing - it's a big undertaking and we need your help:

- A donation of \$45 will provide supplies for 1 HYPOTHEkid for 15 weeks
- A donation of \$195 will fully fund one student's participation in a 15 week afterschool program.

Anything you give will help inspire future thinkers, creators, and questioners who might not otherwise get this chance. Getting students interested in STEM at a young age is crucial - we're ready to take on the challenge. Will you help us?
