

## Give the Gift of Opportunity

Everyone agrees that economic opportunity should be accessible to all. But for many kids in underserved communities, financially stable careers in STEM fields seem out of reach. Their schools often don't have the resources to expose them to engaging STEM education and training.

HYPOTHEkids has been working tirelessly to address this challenge. Here are the highlights of our accomplishments this year:

- Over 4,000 NYC elementary students participated in our innovative hands-on Science Clubs. Because it's crucial to spark excitement about STEM at a young age.
- We grew our Hk Maker Lab program, which trains students to solve global health problems through original biomedical engineering projects.
- We also expanded Bioforce, a summer program for high schoolers that provides intensive lab training and internships at prestigious research

institutions. Bioforce grads get a huge leg up when applying to colleges with STEM tracks.

- And for the first time, we brought Bioforce into a NYC public school as part of its work-based learning program. This pilot project has the potential to scale up dramatically with the help of funders like you.

In 2023, we have lots to look forward to, including bringing HYPOTHEkids Science Clubs to at least 20 NY Public Library branches and training recently arrived immigrants on engineering design.

Please help us to continue this essential work and expand our impact by donating now!
