

Please forward this opportunity to any qualifying teens you know!

**The Maker Lab applications
open today, December 20th!**

The Hk Maker Lab is an intensive six-week summer program to learn the foundations of engineering design. Focusing on addressing a health problem, participants will design, prototype and test a biomedical device and develop an associated business plan. The program will culminate in a presentation to leading executives from the biomedical community.

The program usually takes place over six weeks at the Columbia School of Engineering in Biomedical Engineering Department. Due to COVID, the 2020 program had to be adapted to virtual learning very quickly. The 2021 program will most likely be virtual.

Applications for the Summer of 2021 opened today and will remain open until March 15th, 2021. To learn more about how students qualify, click the button below!
